# D38999-Style Connectors & Termini for Ethernet and High-Speed Data

KJ Series with 100 Mbps - 10 Gbps Catalog

ITT

# Amazing things happen when great things connect

## More than a Century of Connections

Since 1915, ITT's Cannon brand has designed connectors for a history of "firsts." From the first "talking" movie to the first man on the moon, we've set the standard for reliable, high-performance interconnects that transfer high-speed data, power and signal in the most demanding applications and harshest environments. Today we proudly continue our legacy of innovation with custom and off-the-shelf interconnect solutions for valued customers and distribution partners around the globe. Our goal is to connect the world and inspire the successes of the next century—because at ITT Cannon, amazing things happen when great things connect.

## The Cannon Difference

- Proven engineering, design & manufacturing capabilities
- Global product reach with local customer support
- Unrivalled customization experience
- A committed innovator & business partner

## About ITT

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the energy, transportation and industrial markets. Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life. ITT is headquartered in Stamford, CT, with employees in more than 35 countries and sales in approximately 125 countries. For more information, visit [itt.com](http://itt.com).

# An Introduction to High-Speed Data Solutions

Standard-based high-speed data networks have become ubiquitous in today's world, and the aviation domain is no exception. But connecting devices in the harsh airborne environment brings requirements which cannot be met by common connector types. For example, a typical Ethernet network installation uses very low cost, plastic RJ45 connectors. These connectors are not designed to withstand extreme shock and vibration. Furthermore, the RJ45 connectors typically do not accommodate the shielded network cables which are common in aviation. With the advent of ARINC 664, which defines an Ethernet data network for aircraft installations, a need arose to develop an airborne quality contact system for use in ARINC 600 Rack & Panel connectors as well as 38999-style connectors.

As a result of ARINC activities involving many connector companies, a standard evolved defining the geometry and requirements for size 8 Quadrax contacts. The details of the size 8 Quadrax contacts and the performance requirements are defined in ARINC Specification 600. ITT Cannon's solution is based on ARINC 600 design and performance specifications.

In addition to Quadrax contact solutions, prerequisites for increased data rates in aircraft are resulting in new types of cable and contacts that can achieve higher data transfer rates. New Cat 6A and Cat 7 cable, with four shielded twisted wire pairs, is making it possible to bring 10 Gbps Ethernet networks on board for the first time.

But in addition to high quality cable, these network speeds also demand high performance contacts, in order to carry the required data rates without errors. This is particularly important in Ethernet systems where error checking protocols can significantly slow down system speeds when data is lost and it must be re-sent.

Our new OctoGig and OctoRax contacts and connector systems provide the ideal solutions for these new high speed networks.

OctoRax is the ultimate solution for high speed networks, in the smallest and lightest package possible. With an extremely high density design, OctoRax provides eight impedance matched contacts in the same space used by a size 8 Quadrax contact.

OctoGig is an easy-to-install solution. Utilizing standard size 22 contacts and termination techniques, OctoGig's unique design provides high-speed performance in a package that can be easily field terminated and installed.

These new data termini provide a complete solution for current and evolving High-Speed data requirements.

# ITT Cannon High-Speed Termini

Data and signal transfer in aerospace and defense applications is moving faster than ever before. From high-fidelity IFE applications on modern commercial airliners, to the growing number of sensors used to collect and process data on military aircraft, ground vehicles, and shipboard systems, the demand for high-power, high-bandwidth interconnect solutions is growing at the speed of business. To meet these needs, engineers and manufacturers are designing smaller, lightweight and ruggedized connectors that improve both data throughput and signal integrity, no matter the conditions or environment.

ITT Cannon is a leading global manufacturer of interconnect solutions serving aerospace and defense customers worldwide. We offer a wide range of high-speed, high bandwidth data solutions including Quadrax, Octorax, OctoGig™ 10 Gb Ethernet, RF and Twinax. Whether transferring critical signals to commercial and military pilots, streaming data through complex military satellites, or ensuring business professionals stay connected via streaming Wi-Fi during international flights, ITT Cannon connects the world's most important information with those who need it most.

## Key Features & Benefits:

- Low insertion force contacts
- Environmental & non-environmental versions
- Polarizing posts that are removable from the mating face
- Field replaceable inserts
- Crimp, coax, power, printed circuit, and wire wrap-able post style contacts
- Waveguide connections available

**Twinax**

- Small compact size configured for size 8 cavities.
- Fully tested at 2.5 Gb data rates.
- Available in popular rectangular ARINC 600 and circular Connectors.
- Single compact solution for SPE.

**Quadrax**

- Small compact size configured for size 8 Cavities.
- Fully tested at 5 Gb data rates.
- Available in popular rectangular ARINC 600 and circular connectors.
- Exceeds ARINC Specifications for Quadrax contacts.
- Single compact solution for 5 Gb data transfer over copper.

**OctoRax**

- Small compact size configured for size 8 Cavities.
- Fully tested at 10 Gb data rates.
- Available in popular rectangular ARINC 600 and circular connectors.
- Single compact solution for 10 Gb data transfer over copper.

**OctoGig™ Termini**

- Small, lightweight and easy to install.
- Fully tested at 10 Gb data rates.
- Suitable for use with Cat 7 Cable
- Uses standard Size 22 contacts with standard tooling.
- Available in popular rectangular ARINC 600 and circular Connectors.
- Single Termini Solution for 10 Gb data transfer over copper.

# RF Coax Termini

ITT Cannon offers a comprehensive selection of high-speed contacts designed to meet the performance levels required for multi-gigabit modulated data transmission over wireless networks.

Currently compatible with 802.11ac networks, performance levels also support upcoming generations of 802.11 wireless Ethernet system performance requirements, as well as Ka/Ku band systems for MTS architecture being implemented on aircraft for in flight internet connectivity in international locations.

## High-Speed RF Performance

Contact Size	Receptacle Part Number	Plug Part Number	RF Cable P/N	Rated Performance (GHz)
8	980-9501-015	980-9501-021	RG-405	32

# Multi-Port RF 38999 Connector

**BMB Size #8, +26 GHz**

**SMPM Size #12, +60 GHz**

**SMPS Size #16, +100 GHz**

ITT Cannon expands its D38999-style connector portfolio to include 26 to 100 GHz, Multi-Port RF termini.

Providing seamless adoption across any MIL-DTL-38999 style connectors, our BMB, SMPM and SMPS, spring-loaded termini offer constant interface connection and performance in high shock and vibration applications.

# KJAQ Series with ARINC Twinax, Quadrax & Octorax Contacts

## KJAQ

The KJAQ is a hi-reliability connector used today to deliver data rates up to 10 Gbs. Featuring versions of a rear release crimp pin or socket contacts and front release PC pin Quadrax versions. The KJAQ series uses an ARINC compliant contact system. The KJBQ series uses a MIL- DTL 38999 compliant contacts system. Both connector series meet the harsh environment required by both the ARINC and 38999 specifications.

## Ordering Guide

1- Series	2- Shell Style	3- Class	4- Endbell	5- Shell Size	6- Hardware Finish	7- Contact Count	8- Contact Type	9- Polarization	10- PC Mod Code	11- Contact Mod Code
KJAQ	2	N	T	21	F	4	C	N	2	

1- Series	
KJAQ	Series III Connector with insert for ARINC style (Twinax Quadrax and Octorax contacts).
2- Shell Style	
0	Wall mount receptacle with rear thread; accommodates rear release, rear removable crimp pin contacts.
2	Box mount receptacle without rear thread; accommodates front release, front removable PC pin contacts.
4	Jam Nut Receptacle without rear thread, accommodates front release, front removable PC pin contacts.
6	Straight plug accommodates rear release, rear removable crimp socket contacts.
7	Jam nut receptacle with rear thread; accommodates rear release, rear removable crimp pin contacts.
3- Class	
N	Non-Environmental
4- Endbell	
T	No Rear Accessory
5- Shell Size	
9, 17, 21, 23, 25 Per 38999 Series III Connectors	
6- Hardware Finish	
F	Selective Electroless Nickel over Electroless Silver (RoHS)
W	Olive Drab Cadmium over Electroless Nickel Plate

7- Contact Count	
1	Single size 8 contact (size 9 shell)
2	Two size 8 contacts (size 17 shell)
4	Four size 8 contacts (size 21 shell)
6	Six size 8 contacts (size 23 shell)
8	Eight size 8 contacts (size 25 shell)
8- Contact Type	
C	Quadrax
E	Octorax
T	Twinax
-	Use "-" when ordering less contacts.
9- Polarization	
N	Normal
A, B, C, D, E	Reference polarization table at start of this section
10- PC Contact MOD Code (applies to shell style 2 & 4)	
1	.150" Min solder post extension (Contact type C)
2	.250" Min solder post extension (Contact type C and E)
11- Contact MOD Code	
Leave Blank if None	
L	Less contacts, not stamped on connector

If mixed contact types are required, use Mod Code L and purchase contacts separately or contact factory for required configuration. For Twinax PCB configurations, please contact the factory.

# KJAQ Insert Arrangement & Polarization

## KJAQ Insert Arrangements

Size 9

Size 17

Size 21

Size 23

Size 25

### Notes:

1. All 38999-Style type inserts, in both the plug and the receptacle connectors, provide electrical bonding of the cable shield to the housing.
2. 38999 type inserts are integral part of the shell. Arrangements, other than those shown, are available upon request.
3. All insert arrangements are shown as viewed from the front view pin connector.
4. To minimize contact splay and to assure proper mating, each rear release "Quadrax" pin contact is supplied with a plastic "stabilizer."

# KJBQ Series with BACC47 Twinax, Quadrax & Octorax Contacts

## KJBQ

The KJBQ is a hi-reliability connector used today to deliver data rates up to 10 Gbs. Featuring versions of a rear release crimp pin or socket contact. The KJAQ series uses an ARINC compliant contact system. The KJBQ series uses a MIL-DTL 38999 compliant contacts system. Both connector series meet the harsh environment required by both the ARINC and 38999 specifications.

## Ordering Guide

1- Series	2- Shell Style	3- Class	4- Shell Size	5- Hardware Finish	6- Contact Count	7- Contact Type	8- Polarization	9- Contact Mod Code
KJBQ	6	T	11	F	01	P	N	L

1- Series	
KJBQ	Series III Connector with insert for 38999 (Twinax, Quadrax and Octorax contacts).
2- Shell Style	
0	Square flange, wall mount receptacle with rear thread; accommodates rear release, rear removable pin or socket crimp contacts.
6	Straight plug accommodates rear release, rear removable pin or socket crimp contacts.
3- Class	
T	Environment-resistant (without rear accessory)
4- Shell Sizes	
11, 17, 21, 23, 25 Per 38999 Series III Connectors	
5- Hardware Finish	
F	Electroless Nickel Plated Aluminum (RoHS code = ROH)
W	Olive Drab Cadmium over Electroless Nickel Plated Aluminum (RoHS code = NTC)

6- Contact Count	
01	Single size 8 contacts (size 11 shell)
75	Two size 8 contacts (size 17 shell) Four size 8 contacts (size 21 shell)
06	Six size 8 contacts (size 23 shell)
08	Eight size 8 contacts (size 25 shell)
7- Contact Type	
P*	Pin Quadrax (Crimp)
S*	Socket Quadrax (Crimp)
PE	Pin Octorax (Crimp)
PT	Pin Twinax (Crimp)
ST	Socket Twinax (Crimp)
SE	Socket Octorax (Crimp)
8- Polarization	
N	Normal
A, B, C, D, E	Reference polarization table at start of this section
9- Contact MOD Code	
L	Less contacts, not stamped on connector

\* For PCB configurations, please consult the factory.

If purchasing less contacts or mixed contact types, use contact type 'P' or 'S' and contact modifier code 'L'.

# KJBQ Insert Arrangement & Polarization

## KJBQ Insert Arrangements

### Notes:

1. All 38999-Style type inserts, in both the plug and the receptacle connectors, provide electrical bonding of the cable shield to the housing.
2. 38999 type inserts are integral part of the shell. Arrangements, other than those shown, are available upon request.
3. All insert arrangements are shown as viewed from the front view pin connector.
4. To minimize contact splay and to assure proper mating, each rear release "Quadrax" pin contact is supplied with a plastic "stabilizer."

# KJB Series with OctoGig™ Contacts

## KJB OctoGig™

The OctoGig contact was designed to be compatible with 38999-Style connectors. A hi-reliability connector used today to deliver data rates up to 10 GHz. Featuring versions of a rear release crimp pin or socket contacts and front release PC pin version.

Crimping Tool Table

Contact	Crimping Tool	Positioner	Selector Position
Signal Contacts	M22520/2-01	M22520/2-37	5
Outer body	M22520/5-01	M22520/5-45	A 0.231 ±0.003

Step 1 - Slide stabilizing sleeve and crimp ferrule over the cable.

Step 8 - Place the two contacts in the slots of the contact retention sleeve and snap them into position as illustrated below.

Caution: Place contacts in appropriate slots, as shown

Step 2 - Strip cable jacket .440 +/- .020

Caution: Use end "B" of cable, care must be taken not to nick the cable shield.

Step 9 - Slide the crimp ferrule forward, under the cable shield.

Step 10 - Align the yellow wire (#1) with the key on the shoulder of the Twinax body and partially insert prepared assembly into the Twinax body.

Caution: The insulator keyway must be aligned with internal key of outer body.

Step 11 - Trim the shield strands flush with the shoulder of the crimp ferrule.

Step 12 - Complete the insertion of the insulator-contact sub-assembly into the body. Ensure the crimp ferrule is flush with outer body. Using the crimp tool M22520/5, and die set Y1999 or M22520/5-45 to crimp outer body at crimp area as shown below.

Step 3 - Comb out the cable shield; move it out of the way.

Step 4 - Cut off protective tape.

Step 5 - Mark the 2 wires at the strip dimension as illustrated above.

Step 6 - Splay the wires away from each other and cut off filler rod.

Step 7 - Strip the insulation of the wires and crimp the signal contacts as per the Crimping Tool Table leaving no gap between insulator and the contacts.

Caution: Care must be taken not to damage the wire insulation and not to nick the wire strands. Also, all two contact tips should be within .020 after crimping.

Step 13 - Crimp the outer body per Crimping Tool Table (using position A Hex Dieset .231")

Caution: Crimp length to be .270 +.000/- .025, as measured from the end of the crimp sleeve.

Step 14 - After installation of the Twinax into the Twinax splice, slide the sealing boot forward into the contact cavity until stop.

Crimping Tool Table

Contact	Crimping Tool	Positioner	Selector Position
Signal Contacts	M22520/2-01	M22520/2-37	5
Outer body	M22520/5-01	M22520/5-45	A 0.231 ±0.003

**Step 1** - Slide crimp ferrule over the cable.

**Step 2** - Strip cable jacket .440 +/- .020

Caution: Use end "A" of cable, care must be taken not to nick the cable shield.

**Step 3** - Comb out the cable shield; move it out of the way.

**Step 4** - Cut off protective tape.

**Step 5** - Mark the 2 wires at the strip dimension as illustrated above.

**Step 6** - Splay the wires away from each other and cut off filler rod.

**Step 7** - Strip the insulation of the wires and crimp the signal contacts as per the Crimping Tool Table leaving no gap between insulator and the contacts.

Caution: Care must be taken not to damage the wire insulation and not to nick the wire strands. Also, all two contact tips should be within .020 after crimping.

**Step 8** - Place the two contacts in the slots of the contact retention sleeve and snap them into position as illustrated below.

Caution: Place contacts in appropriate slots, as shown

**Step 9** - Slide the crimp ferrule forward, under the cable shield until it stops and captivates the shield between the crimp ferrule and the retention sleeve

**Step 10** - Fold the shield back over the crimp ferrule, align the blue wire (#2) with the key on the shoulder of the Twinax body and partially insert thus far prepared assembly into the Twinax body.

**Step 11** - Trim the shield strands flush with the shoulder of the crimp ferrule.

Caution: Care must be taken not to damage the crimp sleeve.

**Step 12** - Close the M22520/5, M22520/5-45, cavity A over the cable behind the crimp area and use the tool to complete the insertion of the contact assembly into the body.

**Step 13** - Crimp the outer body per Crimping Tool Table (using selector position A)

Caution: Crimp length to be .400 +.000/- .025, as measured from the end of the crimp sleeve.

Caution: Care must be taken not to damage the crimp sleeve.

**Step 13** - Close the M22520/5, M22520/5-45, cavity A over the cable behind the crimp area and use the tool to complete the insertion of the contact assembly into the body.

**Step 14** - Crimp the outer body per Crimping Tool Table (using selector position A)

Caution: Crimp length to be .250 +.000/- .025, as measured from the end of the crimp sleeve.

**Step 15** - After installation of the Quadrax into the connector, slide the sealing boot forward into the contact cavity until stop.

Specifications and dimensions subject to change

# OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable Assembly - Female Connector (Socket) 980-2002-552

- Step 1** - Cut cable RCN9047-26 to 392.20" using round cable cutters  
 a. To get the cut length for an assembly with one male and one female end, subtract 1.85" from the total finish length of the assembly  
 Example: A 1 MT assembly would have a cable cut length of 37.52"

- Step 2** - Slide the retention cap onto the cable with the flat edge towards the cable and 2 clips towards the end.

- Step 3** - Slide the O-Ring onto the cable next.  
Note: the exit of this connector is larger than the cable diameter. It may be necessary to install build up shrink tubing between the O-Ring and the support sleeve or use a shrink boot for proper strain relief.

- Step 4** - Slide the support sleeve onto the cable with the larger opening towards the cable and the smaller opening towards the cable end.

- Step 5** - Strip the left end at .86" using one of the following methods

- a. Laser strip (This may require some set up).

- b. Place a piece of 1/2" Kapton tape with the outside edge at .86".

- b1. Using small scissor, carefully cut the outer jacket in 2 places, down to the edge of the tape.

- b2. Cut the two flaps off at the edge of the tape using flush cutters.

- Step 6** - Brush out the outer shield using a braid brush.

- Step 7** - Slide the support sleeve up to the edge of the outer jacket and fold the shield back over it. Secure the shield ends with Kapton tape.

- Step 8** - Mark the foil tape of each twisted pair at .157" from the edge of the outer braid.

- Step 9** - Cut off the foil tape down to this mark.

- Step 10** - Slide the compression sleeve over the wires with the larger opening facing the cable and the smaller opening facing the end of the wires. Fit compression sleeve over the shield wires and support sleeve. Tape compression sleeve in place.

- Step 11** - Fan out the wires around the cable and cut off the white filler as far down as possible.

Dimensions shown in inches and (mm)  
 Specifications and dimensions subject to change

## OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable Assembly - Female Connector (Socket) 980-2002-552

**Step 12** - Mark each wire at 0.177" from the end

**Step 13** - Strip each wire at the .177" mark on the 26awg slot of the hand stripper

- A good strip is achieved by making sure the wire is straight and the strippers are perpendicular to the wire. To ensure no wire damage and a clean strip: close strippers around the wire, open slightly, rotate the hand holding the strippers a 1/4 turn, close again.

Caution: Do not use the strippers to pull off the jacket slug

**Step 14** - One wire at a time:

- Remove the jacket slug.
- Slide contact from 980-2002-552 connector kit onto the wire
- Crimp contact onto wire using M22520/2-01 crimper, K1999 Die and selector set to 4.

**Note:** A good crimp will have wires visible in the inspection window and wire jacket within 2 wire diameters of the rear of the contact.

**Step 15** - Fan the wires out around the cable so that the insert will sit inside the group of wires.

**Step 16** - Insert each set of twisted pairs into the four sections of the connector insert. (Wire color and location may depend on individual requirements though 1 to 1 wiring is recommended). The indents in the contacts will fit in between the two tabs in each wire slot of the insert.

- Positions 1 and 2 are located on the section with the rounded point in the center.

**Step 17** - Install the retention sectors over the contacts. The two wings should fit into the slots nearer to the mating face and the hole will line up with the tab nearer the rear of the contacts. The side with the ridge will face towards the insert.

**Step 18** - Remove the Kapton tape from around the compression sleeve and slide the sleeve up off of the shield. Trim the shield to just above the lip of the support sleeve using flush cutters. Remove the Kapton tape holding the shield ends, the cut off portion of the shield should come off with the tape.

**Step 19** - Slide the compression sleeve back down over the shield and support sleeve. No shield should be visible after the compression sleeve is installed.

# OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable Assembly - Female Connector (Socket) 980-2002-552

- Step 20** - Lining up the section of the insert with the round point in the center to the section divider of the connector body with the round point, insert the insert into the connector body. The master keyway will be to the right of the section with the round point.
- a. You will have to look at the mating face of the connector body, the insertion face of the body has no round point.

- Step 21** - The support sleeve may not want to fully seat on the body. In this case used the back of a plastic pick to push the support sleeve down inside the body until fully seated. The rear edge of the support sleeve will be below the two cut outs in the connector body.

- Step 22** - If you have installed build up tubing, slide it up to the rear of the support sleeve and shrink. Take care not to melt the support sleeve and allow the tubing to cool before moving on to the next steps.

- Step 23** - Slide the O-Ring up and then push it down inside of the connector body to rest on top of the support sleeve. You may need to use the back of a plastic pick to get the ring to seat.

- Step 24** - Slide the retention cap up to the back of the connector body. Line up the clips with the cut outs on the connector body. Pushing on two sides, press the retention cap into the connector body until the 2 clips pop out into the cut outs.
- a. This step can be a little difficult. You may need to put the connector into a vise and press down on the retention cap with a pair of PTFE wrapped pliers to get the clips to fully engage.

## OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable 10 Meter Assembly - Male Connector (Pin) 980-2002-551

**Step 1** - Cut cable RCN9047-26 to 392.20" using round cable cutters

a. To get the cut length for an assembly with one male and one female end, subtract 1.85" from the total finish length of the assembly

Example: A 1 MT assembly would have a cable cut length of 37.52"

**Step 2** - Slide the Retention Cap onto the cable with the flat edge towards the cable and 2 clips towards the end.

**Step 3** - Slide the O-Ring onto the cable next.

**Note:** the exit of this connector is larger than the cable diameter. It may be necessary to install build up shrink tubing between the O-Ring and the support sleeve or use a shrink boot for proper strain relief.

**Step 4** - Slide the support sleeve onto the cable with the larger opening towards the cable and the smaller opening towards the cable end.

**Step 5** - Strip the left end at .86" using one of the following methods

a. Laser strip (This may require some set up).

b. Place a piece of 1/2" Kapton tape with the outside edge at .86".

b1. Using small scissor, carefully cut the outer jacket in 2 places, down to the edge of the tape.

b2. Cut the two flaps off at the edge of the tape using flush cutters.

**Step 6** - Brush out the outer shield using a braid brush.

**Step 7** - Slide the support sleeve up to the edge of the outer jacket and fold the shield back over it. Secure the shield ends with Kapton tape.

**Step 8** - Mark the foil tape of each twisted pair at .157" from the edge of the outer braid.

Edge of the shield

**Step 9** - Cut off the foil tape down to this mark.

**Step 10** - Slide the compression sleeve over the wires with the larger opening facing the cable and the smaller opening facing the end of the wires. Fit compression sleeve over the shield wires and support sleeve. Tape compression sleeve in place.

**Step 11** - Fan out the wires around the cable and cut off the white filler as far down as possible.

# OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable 10 Meter Assembly - Male Connector (Pin) 980-2002-551

**Step 12** - Mark each wire at 0.177" from the end

**Step 13** - Strip each wire at the .177" mark on the 26awg slot of the hand stripper

- a. A good strip is achieved by making sure the wire is straight and the strippers are perpendicular to the wire. To ensure no wire damage and a clean strip: close strippers around the wire, open slightly, rotate the hand holding the strippers a 1/4 turn, close again.

Caution: Do not use the strippers to pull off the jacket slug

**Step 14** - One wire at a time:

- a. Remove the jacket slug.  
b. Slide contact from 980-2002-551 connector kit onto the wire  
c. Crimp contact onto wire using M22520/2-01 crimper, K1999 Die and selector set to 4.

**Note:** A good crimp will have wires visible in the inspection window and wire jacket within 2 wire diameters of the rear of the contact.

**Step 15** - Fan the wires out around the cable so that the insert will sit inside the group of wires.

**Step 16** - Insert each set of twisted pairs into the four sections of the connector insert. (Wire color and location may depend on individual requirements though 1 to 1 wiring is recommended). The indents in the contacts will fit in between the two tabs in each wire slot of the insert.

- a. Positions 1 and 2 are located on the section with the rounded point in the center

**Step 17** - Install the retention sectors over the contacts. The two wings should fit into the slots nearer to the mating face and the hole will line up with the tab nearer the rear of the contacts. The side with the ridge will face towards the insert.

**Step 18** - Remove the Kapton tape from around the compression sleeve and slide the sleeve up off of the shield. Trim the shield to just above the lip of the support sleeve using flush cutters. Remove the Kapton tape holding the shield ends, the cut off portion of the shield should come off with the tape.

**Step 19** - Slide the compression sleeve back down over the shield and support sleeve. No shield should be visible after the compression sleeve is installed.

# OctoGig™ Connectors and Gore™ RCN9047-26 Ethernet Cable 10 Meter Assembly - Male Connector (Pin) 980-2002-551

- Step 20** - Lining up the section of the insert with the round point in the center to the section divider of the connector body with the round point, insert the insert into the connector body. The master keyway will be to the right of the section with the round point.
- a. You will have to look at the mating face of the connector body, the insertion face of the body has no round point.

- Step 21** - The support sleeve may not want to fully seat on the body. In this case use the back of a plastic pick to push the support sleeve down inside the body until fully seated. The rear edge of the support sleeve will be below the two cut outs in the connector body.

- Step 22** - If you have installed build up tubing, slide it up to the rear of the support sleeve and shrink. Take care not to melt the support sleeve and allow the tubing to cool before moving on to the next steps.

- Step 23** - Slide the O-Ring up and then push it down inside of the connector body to rest on top of the support sleeve. You may need to use the back of a plastic pick to get the ring to seat.

- Step 24** - Slide the retention cap up to the back of the connector body. Line up the clips with the cut outs on the connector body. Pushing on two sides, press the retention cap into the connector body until the 2 clips pop out into the cut outs.
- a. This step can be a little difficult. You may need to put the connector into a vise and press down on the retention cap with a pair of PTFE wrapped pliers to get the clips to fully engage.

# About ITT Cannon

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the energy, transportation and industrial markets. Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life. Founded in 1920, with employees in more than 35 countries and sales in a total of approximately 125 countries.

For more information visit [itt.com](http://itt.com)

ITT's Cannon brand offers a product portfolio that remains one of the most extensive in the industry. Continuous investment in technology, research and investment have enabled us to provide new, innovative solutions to markets including:

- **Commercial Aerospace**
- **Military & Defense**
- **Industrial**
- **Medical**

When you specify an ITT Cannon interconnect solution, you can rely on products designed, developed and manufactured to the highest quality and reliability standards. This tradition of excellence is based on ITT's corporate culture of operating its businesses under the principles of Six Sigma. At ITT, Six Sigma is not just a quality philosophy but a complete corporate culture that drives the entire business. Our Value Based Management and Value-Based Product Development systems are two cornerstones that allow for the development of both leadership and product engineering principles.

## Six Sigma Manufacturing

ITT Cannon operates manufacturing facilities in the United States, Germany, Italy, Mexico, China and Japan, all of which have particular product area strengths that allow ITT Cannon to offer a truly global presence to our customers. Our facilities are world class and accommodate full vertical integration, utilizing the latest manufacturing technologies including automated and robotic machining centers, Super Market manufacturing cells, Kanban pull systems, and automated electrical, mechanical, and optical test and inspection equipment. The combination of our manufacturing strength and our advanced manufacturing facilities allows ITT to offer products at market driven prices. Our capabilities, especially in robotics, computerized precision tooling, Kaizen Project Management, Six Sigma tools and testing give ITT the most optimized global manufacturing

footprint in the interconnect industry.

## The Custom Difference

As an industry leader in harsh environment interconnect applications, ITT's world class engineering teams work directly with our customers to design and develop cost-effective solutions for their applications. In many cases we may modify one of our standard designs to ensure a highly reliable solution where timing is critical. When custom connectors are required, we collaborate with clients and partners with a goal to design the most reliable, cost-effective solution possible. Our engineering and product management teams provide a thorough analysis of proposed solutions, ensuring our customers receive the right solution for their program and application needs.

## RoHS Compliance Information

ITT has implemented a strict parts control plan for all ITT electronics plants worldwide that allows the Cannon product portfolio to meet the requirements of the European Union Directive 2002/95/EC better known as the Reduction of Hazardous Substances initiative. As appropriate, specific Cannon products may be ordered with an R prefix number which insures our customers will receive RoHS compliant parts for their commercial electronics applications and equipment. Since most RoHS hazardous substances center around specific metal plating and lead solder coatings, ITT's products for RoHS compliance are available in the following plating finishes: electroless nickel, stainless steel, anodize over aluminum and gold plating. It should be noted that gold plating would be recommended as the replacement for tin-lead solder when ordering board mount connectors.

# Product Safety Information

**This note must be read in conjunction with the Product Data Sheet / Catalog. Failure to observe the advice in this information sheet and the operating conditions specified in the Product Data Sheet / Catalog could result in hazardous situations.**

## 1. MATERIAL CONTENT & PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups:

- a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.
- b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

## 2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters.

Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local over-heating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

## 3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

## 4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

## 5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

## 6. IMPORTANT GENERAL INFORMATION

**6.1** Air and creepage paths/operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations. For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

**6.2** Temperature. All information given are temperature limits. The operation temperature depends on the individual application.

**6.3** Other important information. Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

## 7. MISCELLANEOUS

"Cannon" and "Veam" are brands of ITT, Inc. ("ITT"). ITT's connector products are intended to be used in accordance with the specifications in this publication (and any other relevant publications that are applicable to the specific product). Any use or application that deviates from the stated operating specifications is not recommended and may be unsafe. No information and data contained in this publication shall be construed to create any liability on the part of ITT or its successors, assigns, officers, directors, employees, affiliates, and agents, including, but not limited to, any liability for any patent infringements or other rights of third parties which may result from its use. Any new issue of this publication shall automatically invalidate and supersede all previous issues. Reprinting this publication is generally permitted, provided that ITT's prior written consent is obtained, and the source is indicated. This publication is not to be construed as an offer. It is intended merely as an invitation to make an offer. Product availability, prices, and delivery dates are exclusively subject to ITT's order confirmation form; the same applies to orders based on development samples delivered. Please refer to ITT's Terms and Conditions of Sale located at [www.ittcannon.com](http://www.ittcannon.com) for the full text of the terms and conditions that apply to ITT's connector products. Commodities in this catalogue may be controlled for export by the International Traffic in Arms Regulations (ITAR) and Export Administration Regulations (EAR) when specifically designed, modified, or configured for articles controlled by the United States Government.

# Additional rugged, reliable and proven connector solutions from ITT Cannon

## C5 Warrior Series

Ultra-High-Density, 10 Gbps Solution, 4 times smaller than D38999 connectors for USB-C, DisplayPort, HDMI & Gb Ethernet protocols

## Cu Light Series

Size #8 TOSA-ROSA for 10 Gbps Copper-to-Fiber conversion in military circular connectors

## APD Series

- 1 to 51-way layouts
- Fully plastic connector
- High power & high voltage
- Sealing: IP67 / IP69K

## CA Bayonet Series

- 1 to 140 contact arrangements
- Shell size #10SL to #36
- Reverse bayonet up to IP69K
- RoHS, Reach, Cad-free Plating

## CA Threaded / 5015 Series

- 5 polarizations
- Individual wire sealing grommet
- RoHS compliant options
- MIL-DTL 5015 (SAE-AS50151)

## HDx™ Series

- High-Density, small form factor
- High speed data - USB® 3.1 Gen1 up to 5Gbit/s, Ethernet up to 10Gbit/s, HDMI® up to 8.16 Gbit/s

## KP Series

- 10 shell size, with up to 40 layouts from 2 to 61 contacts
- Sealing up to IP67
- VG95238 & MIL-DTL-26482

## KJ Series (38999-style)

- High contact density pin count
- Dual Flange & COTS Panel Mounts
- Fiber Optic, Hermetic, Filter, OctoGig, Twinax, & Quadrax layouts

## MKJ Series

- High-density, miniature footprint
- UNC thread, double start, triple start, bayonet, breakaway and clip lock latching
- GOSSRA and Nett Warrior

## Nemesis Series

- 20+ meter sealing
- Dual coupling or Breakaway
- Power, signal & data
- Blind mating design

## Trident Series

- Plastic & shielded metal variants
- Mixed power and signal layouts
- Sealing up to IP67
- All ranges meet UL 94 V-0

## Veam CIR/FRCIR Series

- 1-159 contacts up to 350A
- RoHS or Reach plating
- Per EN 45545-2 NFPA 130
- Power, signal, fiber, or high-speed

## Universal Contact

- 0.3N contact force/ 0.1mm of deflection
- Surface Mount contact 1.3-4.6mm
- Low contact resistance

## ARINC Rack & Panel Series

- ARINC 404 and 600, blind mate with 1, 3, 4, & 6 gang configurations.
- Crimp, Quadrax, OctoGig, power, PCB & wire wrappable post contacts.

## Nano Series

- PCB or Cabling with 9-51 contacts
- 0.025" contact spacing
- 1 amp contact rating

## D-Sub Series

- Mixed Signal / Power, M24308, Crimp, Solder, PC Tail, Double Density, Filter/ Hermetic
- Up to 104 contact

## Micro Series

- High Temperature (+230°C)
- Low profile configuration
- Mixed power, coax and signal layouts & M83513

## CTC Series

- 8-way to 24-way layouts
- Simple to install and maintain
- Hand insertable contacts
- Up to IP69K with positive locking

## DL Series

- High pin count: 60-440 layouts
- Resilient contact with wiping action directly onto PCB pad
- Min. 10,000 mating cycles

## QLC Series

- Min. 20,000 mating cycles
- High pin count: 60-440 layouts
- Single handed locking and actuation
- EMI/RFI shielding

## RPR Series (EN4165-style)

- ARINC 809-compatible
- Precision PCB tail alignment
- Front release, rear removable insert
- Straight and right angle contacts

## High Speed Termini

- Quadrax, OctoGig™, RF, Twinax, Fiber, HDMI, USB 3.0
- Rapid data from Cat5 to Gb Ethernet to HDMI

## No Profile Series

- High-density, pogo pad solutions with magnetic, breakaway, spring probe or screw-lock coupling designs.
- High-mating systems & sealing level

## ITT Cannon's connector portfolio

is one of the most extensive in the industry, offering customers a range of off-the-shelf and customized interconnect solutions for multiple markets and applications. Visit [ittcannon.com](http://ittcannon.com)

Connect with your ITT Cannon representative today

# Connect with the experts

We deliver high performance, harsh environment interconnect solutions that enable the transfer of data, signal and power in an increasingly connected world.

## Why ITT

ITT is a focused multi-industrial company that designs and manufactures highly engineered critical components and customized technology solutions. ITT's Cannon brand is a leading global manufacturer of connector products serving international customers in aerospace, defense, medical, industrial and transportation end markets. ITT's Connector business, which also includes the Veam and BIW Connector Systems brand, manufactures and supplies a variety of connectors and interconnects that make it possible to transfer data, signal and power in an increasingly connected world.
